Astrus* Tour Analysis

PRESENTED BY SYLVAN QUADY

Streaming in the USA

Chicago being his #1 streaming city tells us something: fans of raw, emotionally heavy rap music gravitate towards Astrus. The majority of his listeners are between 18 and 34 years old, and are nearly 70% female (Chartmetric) and likely grew up listening to artists like Juice WRLD or XXXTentacion, who emphasize emotion and vulnerability in their music.

A viable strategy for Astrus could include more personal storytelling and an intimate connection with the fans he has.

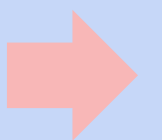

Sonically, Astrus is comparable to iann dior. In addition to the shared emotional composition of their music, the similarity of their flows on some songs is uncanny.

International Streaming

The iann dior comparison is significant, as most of his success has come internationally. Astrus shares a similar trend, with Sydney and Melbourne, Australia appearing between the American cities in his Spotify top 5. The international listening trends point to a notable dynamic: his fanbase is being built by listeners who find music independently of popular radio or playlists; listeners who tend to have a higher conversion rate than average when an artist's work is properly promoted to them.

Market mirroring could be an essential metric for planning Astrus' tour as well. We can link a few US cities with the global markets that are shown to gravitate towards Astrus currently...

Astrus' Positioning - Overview

Confirmed US Markets

1. **Chicago** – #1 on Spotify listeners page with a proven audience for emotional rap
2. **Dallas** – #3 on Spotify and his hometown, Dallas is a strong choice for a tour date
3. **Los Angeles** – #5 on Spotify, and shows up multiple times in a qualitative analysis of Astrus' Instagram followers and comments

Predicted US Markets

- **Logical Locations**
 - **Houston** – *high probability market.* Instagram analysis points to loyal fans and artists with similar global reach tend to find success here
 - **NYC** – huge market, usually contains pockets for emotional rap, less supported by data than other cities
 - **Atlanta** – strong Chicago/LA market mirroring, less data support, but a logical choice based on historical data

United States Tour Targets

#1 Portland, OR

Portland tends to mirror Australian streaming behavior for emotionally driven, alternative-leaning rap, meaning the same discovery-first audience that found Astrus in Sydney and Melbourne likely exists there as well. We also see strong support from Portland on his Instagram.

#3 Albuquerque, NM

Mainly due to Instagram comments, specifically two mentions of the city in Astrus' book signing post, point to a supportive, word-of-mouth community that could see strong conversion rates if added to his tour.

#2 Phoenix, AZ

With a younger listener base, strong mirroring to Australian markets, and a history of supporting emotionally driven rap, it is a somewhat natural extension of a West Coast tour run on the way to Texas.

#4 Salt Lake City, UT

While Utah was mentioned in Instagram comments, what makes SLC an interesting option is the tendency of listeners there to support independent/up-and-coming artists, and they respond well to emotional/alternative rap.

Longshot Tour Locations

Audience Gender Breakdown

*****Astrus' listeners are almost 70% female.** This is on the high end, even for the typical audience of someone with his emotionally driven style. It shows us something about how his music is being received and who it is resonating with best.

What that says...

This base tells us that the emotional nature of his music is landing as genuine rather than performed. Typical consumers of emotional rap are not passive consumers, but active seekers of artists who can artistically articulate emotional complexity and vulnerability in their music

**Psychographics and
Implications**

Who's Listening and Why It Matters

Average Astrus* Listener

A typical listener is likely a young woman between the ages of 17 and 30, who discovered Astrus through a social media algorithm or heard about his music from a friend, and enjoyed it because it made her feel seen. She streams repeatedly rather than just casually, saving songs to playlists and returning to his music frequently (the reason we see Astrus* with about $\frac{1}{3}$ of Sha Crow's ig followers, but similar monthly streams on Spotify).

Implications for Touring & Marketing

Audiences will be very receptive to intimate venues. In promotion, highlighting personal, emotional storytelling over strictly announcement and hype content will yield higher conversions on ticket sales.

This audience should also be more drawn to merchandise (if that is an option) that feels personal and extends the emotional world of Astrus' music into the merchandise through physical objects.
